1. INTRODUCTION

The purpose of this project is to design and develop a modern cafe website called “**Venüs Cafe**” by using web development technologies. The project aims to provide visitors with information about the cafe, menu items, multimedia content and contact details through an attractive and user-friendly interface.

The website was developed as part of the MIS 104 course project requirements. During the development process, various web design concepts and multimedia technologies were applied to create a complete and functional website.

2. PROJECT OBJECTIVES

The main objectives of the project are:

- To create a multi-page website.
- To practice HTML and CSS skills.
- To design a visually appealing user interface.
- To use multimedia elements such as images, audio and video.
- To create a working contact form.
- To publish the website online.
- To gain experience with GitHub and GitHub Pages.

3. TECHNOLOGIES USED

The following technologies and tools were used during the development process:

HTML5

HTML5 was used to create the structure and content of all web pages.

CSS3

CSS3 was used to design the website layout, colors, typography and overall appearance.

GitHub & GitHub Pages

GitHub was used to store project files and manage website development, while GitHub Pages was used to publish the website online and make it accessible through the internet.

Web3Forms

Web3Forms was integrated into the Contact page to provide a working email communication system without requiring a backend server. The backend mail automation forms and settings are maintained via the official service dashboard integration.

Multimedia Technologies

Various multimedia elements were used, including carefully optimized images, audio files, and video files to enhance interactivity.

4. WEBSITE STRUCTURE

The website consists of multiple pages that allow visitors to navigate easily and access different types of information.

Home Page

The Home Page introduces Venüs Cafe and welcomes visitors. It contains the main visual design elements and includes background audio controls that allow users to play or pause music.

About Us Page

This page provides information about the cafe, its vision, services and customer-focused approach.

Menu Page

The Menu Page displays food and beverage products offered by the cafe. Tables are used to organize menu information clearly and effectively.

Gallery / Multimedia Page

This page contains images and videos that showcase the atmosphere, products and services of the cafe.

Contact Page

The Contact Page allows visitors to communicate directly with the cafe through a contact form. Messages are sent using the Web3Forms email service.

5. PROJECT FEATURES

The website includes the following integrated features:

Multiple HTML pages

Navigation menu

Responsive layout

External CSS styling

Internal CSS styling

Inline CSS styling

Image integration

Audio integration

Video integration

HTML tables

Email contact form

Online hosting

User-friendly design

6. DEVELOPMENT PROCESS

The project development process consisted of several distinct stages:

- **Planning Stage:** The overall website structure and content organization were planned before coding started. Different pages and their functions were determined.
- **Design Stage:** Color schemes, typography, page layouts and navigation menus were designed to create a professional appearance.
- **Development Stage:** HTML and CSS were used to build the website. Multimedia elements such as images, audio and videos were integrated into the pages.
- **Testing Stage:** The website was tested on different screen sizes and devices. Links, forms, multimedia content and navigation elements were checked to ensure proper functionality.
- **Publishing Stage:** After completing development and testing, the project was uploaded to GitHub and published using GitHub Pages.

7. CHALLENGES AND SOLUTIONS

Several challenges were encountered during development. One challenge was organizing multiple pages while maintaining consistent navigation throughout the website. This issue was solved by creating a common navigation structure.

Another challenge was implementing email functionality without using a backend server. This problem was solved through the integration of Web3Forms. Additionally, multimedia content had to be optimized and tested to ensure proper loading and compatibility across devices.

8. LEARNING OUTCOMES

This project provided valuable experience in HTML website development, CSS styling techniques, multimedia integration, website deployment, GitHub repository management, responsive web design, form implementation, and user interface design.

The project helped improve practical web development skills and strengthened understanding of modern website creation processes.

9. CONCLUSION

The Venüs Cafe Website project successfully fulfills the requirements of the MIS 104 course project. The website includes multiple pages, multimedia content, tables, email functionality and responsive design principles.

Through this project, valuable knowledge and practical experience were gained in web development, website deployment and user interface design. The final result is a functional, visually appealing and fully accessible cafe website that demonstrates the successful application of HTML, CSS and multimedia technologies.

Thank you.
